

Anza Electric Cooperative, Inc.

A Touchstone Energy[®] Cooperative 

Effective 01/01/2024

RATE 14 SCHEDULE P-1 LARGE POWER > 50kW

TYPE OF SERVICE

Single or Three Phase, 60 Cycle A.C. at available secondary voltage, more than 50 kW of demand.

Available to all types of single phase and three phase services including both power and lighting uses, subject to the established rules and regulations of the Cooperative.

Services under this rate shall have exceeded 50kW in any single billing cycle, or else have a calculated load in excess of 50kW. When monthly demand for an individual domestic or commercial service is measured less than 50 kW for twelve consecutive months it will be eligible to be billed under rate schedule D-2 or A-1 as applicable. It shall be the member's responsibility to notify the Cooperative of this twelve-month period.

All motors with a rated capacity in excess of 7.5 hp must be three phase without express consent of the Cooperative. If three phase is not available a phase converter may be installed with express consent of the Cooperative prior to installation and at no cost to the Cooperative. At no time shall the combined load of the phase converter and motor exceed the demand of a 7.5 hp motor. Protection of three phase motors and other equipment shall be the responsibility of the member. The Cooperative recommends motor savers or other such devices to protect against damage due to single phasing of three phase distribution lines.

RATES

Service Availability Charge	\$48.00
Charge per kWh	\$0.178897
Demand Charge per each kW	\$11.50

MINIMUM

The monthly minimum charge under the above rate schedule shall be no less than the service availability charge.

BILLING DEMAND

The billing demand shall be the maximum kilowatt demand established for any fifteen-minute period during the billing month and shall be measured by using standard demand and energy equipment for metering.

POWER FACTOR ADJUSTMENT

The member agrees to maintain unity power factor as nearly as possible. The monthly demand charge may be adjusted by 1% for each 1% by which the power factor is more than 5% from unity.

START-UP REQUIREMENT

Incremental start controls are mandatory for motors rated 40 hp or larger.

POWER COST ADJUSTMENT CLAUSE

Energy charges may be increased or decreased each month where the purchased power cost varies from the 2022 base rate of \$0.097643 per kWh. This adjustment factor will be uniformly applied to all rate classifications on a per kilowatt-hour basis.
